

Saliva Collection/ Preservation

REAL Saliva DNA Sample Collection System

Provides a safe and rapid all-in-one procedure for the collection, stabilization and transport of 2 ml saliva samples at room temperature

- Painless, non invasive
- Stabilizes buccal cells and white cells in saliva
- Stable for 1 year at RT
- Compatible with DNA isolation methods
- High quality DNA is obtained
- Compatible with REAL Saliva DNA Purification kit

REAL Saliva RNA Sample Collection System

Provides a safe and rapid all-in-one procedure for the collection, stabilization and transport of 1 ml saliva samples at room temperature

- Saliva as sample source for expression studies
- Sample remains stable for 1 month at RT
- Painless, non-invasive collection
- Human mRNA expression profiling

Applications Saliva collection systems:

STR Analysis-Human identification, Genetics, Forensics, Paternity Tests, Research Genotyping, Next Generation Sequencing

Saliva Collection/ Preservation

REAL Saliva DNA Swabs Sample collection kit

Provides a safe and rapid all-in-one procedure for the collection, stabilization and transport of saliva swab samples. Two different formats:

- 1.- Swab is introduced in its cylindric container for a safe transport. Stability of the swab is 1-2 weeks.
- 2.- Swab is introduced into a microtube containing a preservation solution. Buccal cells are stabilized for 1 year at RT and indefinitely at -20°C or -80°C.

Format 1

Format 2

- Painless, non invasive
- DNA from saliva is equivalent to blood DNA
- High quality DNA is obtained
- Compatible with REAL SALIVA DNA purification kit

Tissues and Cells Collection/ Preservation

REAL STOCK (Research Use Only)

Non-toxic solution for storage of cells and tissues which protects and stabilizes genomic DNA and RNA for its later isolation. Samples preserved for 2 weeks at RT, 1 month at 4°C and indefinitely at -20°C or -80°C.

CE IVD Fresh Sample Stool Collection

REAL Stool Collection tube

Empty tube with spoon for the collection of fresh stool samples.

More information in our website: www.reallaboratory.com/products

Microbiome Sample Collection/ Preservation

REAL Saliva Sample Collection Microbiome kit

All-in-one collection kit for the collection and stabilization of microbial DNA from saliva.

Stabilization is instant and the buffer prevents bacterial growth, so the sample provides a representative snapshot of the microbial community that remains unchanged from collection to processing.

- Painless, non invasive
- Non-lytic buffer that preserves microbial community at least 1 year
- Compatible with REAL Saliva Microbiome kit

REAL Stool Sample Collection Microbiome kit

Integrated system for collection, transport and storage of stool samples. Contains a tube with spoon and liquid stabilization solution that preserves the microbiome profiling

- Easy to use
- Stabilizes DNA for several months at RT
- Eliminates odor
- Compatible with DNA purification methods

REAL Vaginal Sample Microbiome kit

Vaginal Self-collection swabs for the collection and stabilization and purification of microbial DNA from vagina for microbiome analysis.

- Cost-effective way to increase participation in STD and HPV screening
- Absolute privacy
- Kit includes swabs and reagents for DNA purification

Ordering information

Saliva Collection/ Preservation & DNA/RNA Purification

Product	Presentation	Reference
Saliva DNA sample collection	1 unit	RBMSAL01CE
Saliva DNA sample collection	100 units	RBMSAL100CE
Saliva DNA sample collection	500 units	RBMSAL500CE
Saliva DNA sample collection	1000 units	RBMSAL1000CE
Saliva RNA sample collection	100 units	RBMSALRNA100CE
Saliva RNA sample collection	500 units	RBMSALRNA500CE
